➢ Host email with a 50GB mailbox and custom email domain.
➢ Create a hub for teamwork with Microsoft Teams.
➢ Users can fully install Office apps on five user devices under one email.

MicroAge Office 365 Total Email Security

SaaS providers, like Microsoft ensure they won't lose your cloud data with built-in redundancy and other high availability measures. However, they do not take responsibility for restoring data if you lose it. Microsoft calls this the Shared Responsibility Model for data protection. That's why Microsoft recommends third-party SaaS backup in its user agreement.

To better protect your Microsoft Tools, MicroAge provides a robust Security Stack for the Office 365 suite, including:

Spam Filter
An Inbound and Outbound Spam Filter helps protects against harmful email messages including malware, phishing, spear-phishing and harmful links. Inbound filtering automatically analyzes inbound emails for deceptive URLs and domains and outbound filtering helps stop attacks originating from inside your network.

Advanced Threat Protection (ATP)
Some of the most dangerous advanced threats are designed to evade email filters. Stopping advanced threats from reaching your users & data requires layered defense. Advanced Threat Protection, analyzes traffic across all of the major threat vectors to help defend against ransomware and other malware, including zero-day attacks and advanced threats.

Backup & Archiving
Help mitigate risk of data loss with Cloud-to-Cloud backup protection for O365. The SaaS Protection offers an all-in-one backup, search, granular restore and export solution for Exchange, OneDrive, SharePoint & Teams.

Sentinel
A comprehensive solution for real-time spear phishing and cyber fraud defense. Using API-based architecture & machine learning, Sentinel analyses historical emails to better identify social engineering & account takeover. Detect anomalous email behavior & DMARC authentication to protect people, businesses, and brands from spear phishing, impersonation attempts, business email compromise (BEC), and cyber fraud.

Forensics
Forensics is a powerful SaaS solution to help remediate threats quickly and efficiently, by automating investigative workflows and enabling direct removal of malicious emails.
